

# Enexis

## About Enexis

Enexis Netbeheer supplies energy wherever we need light and heat. It supplies electricity and gas to more than three million households and businesses in the Netherlands via a, largely, invisible network. Technical and social innovations enable Enexis to facilitate the reverse supply of home-generated sustainable energy. It also ensures there is always enough sustainable energy available.

## All connections in the Weert network area

In 2017, Enexis Netbeheer took over the Weert network area from the Stedin Group. In order to be able to facilitate this transition, the data from all connections in this network area was migrated from Stedin to Enexis' systems.

## Migration key facts

### 42.000 connections

22,000 electricity and 20,000 gas connections

### Big bang

A single-step migration

### Audit

Pre-audit strategy

## Result

The result is a successful migration of 22,000 electricity and 20,000 gas connections.

*Enexis Netbeheer is one of seven network managers in the Netherlands. The main job of a network manager is to install and maintain the energy network in the Netherlands. Also, a network manager is responsible for the transmission of energy, that is, transmitting energy from the power plant or the gas station to homes and businesses.*
